Managing Director of EPD-Norway

<sup>\*</sup> The product contains no substances from the REACH Candidate list or the Norwegian priority list

Estimate of transport from production site to central warehouse in Oslo, Norway. Calculation of this distance is required by the PCR. Note that the product is normally transported directly to construction site (as described in A4).

# **Product**

### **Product description:**

Various sizes, shapes and lengths. Minimum cross-section size is 200 to 200 mm. From one up to several brackets. Precast columns are assembled at foundation with screw type fastening (column shoes) or by installing them in socket type foundations.

### **Product specification**

The composition of the product is described in the table below:

Materials	kg	%
Aggregate	405	40,5
Sand	340	34,0
Cement	139	13,9
Water	70	7,0
Steel	45	4,5
Additives	< 1	< 0,1 %

### Technical data:

The product is certified in accordance with the EN13225:2004/AC:2006 standard. Properties (min/max):

Compressive strength: C25/30 - C50/60.

Length: 2000 - 11500 mm.

Cross-section: 200x200 - 900x900.

#### Market:

Norway

#### Reference service life:

Expected reference service life (RSL) is 60 years.

# LCA: Calculation rules

### Functional unit (A1-C4):

1 tonne with a specified reference service life (RSL) of 60 years.

## System boundary:

Cradle to grave. Included modules production and construction are A1-A5, included modules for end of life are C1, C2 and C4. In the use stage B1-B5 has no activity, and B6-B7 are not relevant. The waste processing stage (C3) has no activity, as waste processing takes place in C1. Module D is not declared. Production process at Skonto includes mould preparation, casting of concrete product, curing and finalising. The product is then loaded on trucks for transportation to building site.

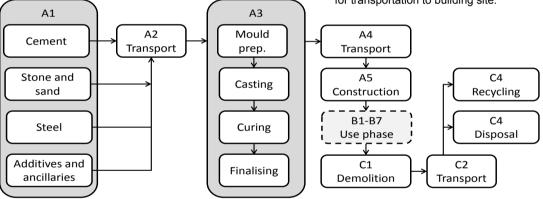

Figure 1: Flow chart of production system

# Data quality:

Data for Skonto Prefab production facilities is for 2013. Transport data is for 2014, but valid for 2013. Material and energy use per declared unit has been calculated using expert judgment and validated against annual consumption. Generic data is from the ecoinvent 2.2 database (2003-2007).

#### Allocation:

The allocation is made in accordance with the provisions of EN 15804. Energy, water and produced waste is allocated on expert judgment to each product group produced by Skonto Prefab to reflect differences between products. The basis for allocation has been information in Building Product Declarations (BPDs) for Skonto Prefab products.

#### Cut-off criteria:

All important raw materials and energy use are included. In the production process, raw materials and energy of low amounts are not included (<1%). These cut-off rules do not apply to dangerous substances.

### LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

The scenario for transportation from production place to user is defined as transport from Salaspils (Latvia) to Stavanger (Norway). This is a typical transportation distance for Skonto Prefab products.

Transport from production place to user (A4)

Туре	Capacity utilisation (incl. return)	Type of vehicle	Distance km	Fuel/Energy	Value
	%			consumption	(l/tkm)
Truck	75	Lorry, >32t, EURO4	975	0,019 l/tkm	18,62
Boat	65	Ferry	469	0,003 l/tkm	1,31

# Installation in the building (A5)

motunation in the building (Ao)		
	Unit	Value
Auxiliary	kg	-
Water consumption	m <sup>3</sup>	-
Electricity consumption	kWh	-
Other energy carriers	MJ	42
Material loss	kg	-
Output materials from waste treatment	kg	-
Dust in the air	kg	0,012

#### Description, A5:

Scenario is modelled as installation of a typical concrete product in a building. Only fossil fuel use during installation is included. Breakage and other inputs are negligible.

### End of Life (C1, C3, C4)

	Unit	Value
Hazardous waste disposed	kg	0
Collected as mixed construction waste	kg	0
Reuse	kg	0
Recycling	kg	0
Energy recovery	kg	0
To landfill	kg	1000

### Description, C1, C3 and C4:

End of Life scenario is based on materials being separated on site. 99 % of steel and 90 % of concrete is recycled. The remaining fractions are sent to landfill (module C4). Energy for material separation is included in C1, therefore there is no activity in C3.

### Transport to waste processing (C2)

Туре	Capacity utilisation (incl. return)	Type of vehicle	Distance km	Fuel/Energy	Value
	%			consumption	(l/t)
Truck	Lorry	/, 16-32t	15	0,0356 l/tkm	0,53

### Description, C2:

Transport to reuse of concrete as aggregate and material recycling of steel.

### Use stage (B1-B7)

There is no significant interaction with the environment in modules B1, B2, B3, B4 and B5, as there is no need for maintenance, repair or refurbishment in the use stage. B6 and B7 are specified as not relevant (MNR) in NPCR020, and are therefore not included. This must not be regarded as an indicator result of zero for B6 and B7.

# **Additional Norwegian requirements**

#### **Electricity**

Latvian electricity mix is used for production site. The main electricity sources are hydropower (39 %), natural gas (35 %) and electricity imported from Russia (18 %). Data are based on ENTSO-E for 2013.

Greenhouse gas emissions per MJ: 0.127 kg CO<sub>2</sub>-eqv/MJ Greenhouse gas emissions per kWh: 0.459 kg CO<sub>2</sub>-eqv/kWh

### **Dangerous substances**

None of the following substances have been added to the product: Substances on the REACH Candidate list (of 16.6.2014) of substances of very high concern or substances on the Norwegian Priority list (of 11.11.2013) or substances that lead to the product being classified as hazardous waste. The chemical content of the product complies with regulatory levels as given in the Norwegian Product Regulations. As the product contains no dangerous substances on the REACH Candidate list or the Norwegian priority list, it is assumed that there are no toxic effects occurring in the use stage.

# **Transport**

Transport from production site to central warehouse in Norway is defined as transport to Oslo. The product is not normally transported to a central warehouse, but directly to construction site (see description of module A4).

#### Indoor environment

The product has not been tested for emissions to indoor environment. The product contains no dangerous substances on the REACH Candidate list or the Norwegian priority list, and a water-based release agent is used. Based on this it is assumed that the product has a negligible impact on the indoor environment and therefore meets the requirements for low emissions (M1) according to EN15251:2007 Appendix E.

### **Carbon footprint**

Carbon footprint has not been worked out for the product.
